

Power Supply Connection

PLEASE NOTE: We recommend hiding the Power Supply Enclosure by placing it in an accessible panel, attached to a wall stud.

- 1 Verify that power has been shut down to the circuit you're working on.
- 2 Using UL listed connectors (wire nut, crimp, etc.), connect the power coming from your building to the wires going into your power supply.
- 3 Using UL listed connectors (wire nut, crimp, etc.), connect the blue and brown wires coming from your power supply to the wires of the product.
- 4 All connections should be stored within the enclosure.
- 5 Attach and secure the cover to the enclosure.
